

(a) Inter-site K_d^* contrast vs. non-uniform Q_b

(b) Apollo 15

(c) Apollo 17

- nominal Q_b (both sites)
- Saito reanalysis ($\alpha_{15} = 0.7$)
- global rescaling diagonal (contrast invariant)
- contrast significance ($0\sigma, 2\sigma, 4\sigma, 6\sigma$)
- published Q_b envelope (panel a)
- joint (K_d, H) RMSE minimum (panels b, c)
- 1-D K_d^* at $H = 6$ cm (panels b, c)
